

“Diamond-Plate” Rubber Stair Mats

Specifications
August 2021

<u>Description:</u>	Made with durable natural and recycled rubber materials, these step mats are perfect for adding traction to industrial and commercial stairways. They have a diamond-plate surface texture that provides superior grip for feet on stairways. These easy-to-install mats are perfect for stairways that need better safety.
<u>Material</u>	Reclaimed and Natural Rubber
<u>Sizes:</u>	9.75” x 29.75”, 2.5 lbs. per mat
<u>Thickness:</u>	3/16”-inch
<u>Available Colors:</u>	Black
<u>Applications:</u>	Anti-Slip, Industrial Stairways, Indoor Stairways, Outdoor Stairways
<u>Why Safety:</u>	A- An analysis of workers’ compensation injury claims from acute-care hospitals showed that the lower extremities (knees, ankles, feet) were the body parts most commonly injured and the nature of injury was most often sprains, strains, dislocations and tears. In addition, STFs were significantly more likely to result in fractures and multiple injuries than were other types of injuries. B- Falls are the most common cause of traumatic brain injuries C- In 2000, 46% of fatal falls were among older adults D-Proper construction and maintenance of stairs and handrails (described in ANSI 2007, NFPA 2002, and below) can reduce hazards. Stairs that are poorly marked or uneven, as well as handrails that are not of the appropriate size, height, or are poorly maintained, can lead to missteps and can cause employees to trip and fall. Check that stair treads and nosing are slip resistant and extend the whole tread. This is especially important for outside stairs exposed to the elements or stairways exposed to wet conditions.
<u>Eco-Friendly:</u>	This is an affordable and ecologically conscious product due to the fact that it is made from both natural and recycled rubber materials.
<u>Traction:</u>	The surface texture of this mat provides excellent traction. The texture is made up of tiny slightly raised ridges that are aligned to maximize friction against feet. The diamond-patterned texture is ideal for improving traction in industrial pathways and stairs.
<u>Safety:</u>	The added traction from the diamond-patterned texture can increase safety by keeping feet planted on the mat. This means that the likelihood of a slip-and-fall accident is decreased. These mats are great for improving the overall safety of a stairway.
<u>Industrial Design:</u>	These rubber stair mats have a design aesthetic that is well suited for use in industrial areas. They also bring a more industrial appeal when placed in commercial areas as well.
<u>Cleaning:</u>	To clean these mats, simply use water and common household cleaners. We do not recommend the use of strong and caustic cleaning solutions like bleach.
<u>Availability:</u>	In Stock.
<u>California Prop 65:</u>	 WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov .
